

Dear Owlsh Hiring Team,

I am writing to express my strong interest in the Senior Cloud Engineer position. With over five years of hands-on experience designing, building, and managing secure, scalable AWS infrastructure, I bring deep expertise in Terraform, infrastructure automation, and comprehensive monitoring solutions—exactly the skills your team needs to drive operational excellence.

Core Strengths for This Role

My extensive hands-on experience with AWS, Terraform, and Kubernetes aligns precisely with the demands of a senior cloud engineering role. The table below provides a quick overview of my key technical skills and years of experience:

Key Technical Skills & Experience Summary

Skill Area Required	Key Technologies	Years of Experience	Level of Expertise
Cloud Infrastructure	AWS, Azure, Google Cloud	15+ years	Expert
Infrastructure as Code	Terraform, Ansible, CloudFormation	9+ years	Expert
Container Orchestration	Kubernetes (EKS, AKS), Docker, ECS	6+ years	Advanced
CI/CD & Automation	GitHub Actions, Jenkins, Bitbucket Pipelines	9+ years	Advanced
Monitoring & Observability	Prometheus, Grafana, CloudWatch, OpenSearch	6+ years	Advanced
Networking & Security	AWS VPC, VPN, Route 53, Security Groups, WAF	15+ years	Advanced
Scripting & Development	Python, Bash, TypeScript, Java	12+ years	Advanced
Database Management	MySQL, PostgreSQL, DynamoDB, BigTable	3+ years	Intermediate
Compliance & Standards	ISO 27001/27002, SOC 2, GDPR, HIPAA	2+ years	Intermediate

AWS & Terraform Expertise: I have extensive experience architecting and implementing complex AWS environments using Terraform as the primary Infrastructure as Code tool. My work includes: - Designing and deploying multi-region, multi-account architectures with VPC peering, Transit Gateway, site-to-site VPN, and AWS PrivateLink. - Developing modular, reusable Terraform modules for consistent, compliant deployments across development, staging, and production. - Automating entire infrastructure lifecycles—from provisioning and configuration to scaling and teardown—through CI/CD pipelines.

Infrastructure Management & Automation: I specialize in creating fully automated infrastructure workflows that reduce manual toil and increase reliability. This includes: - Integrating Terraform with GitHub Actions, Jenkins, and Bitbucket Pipelines for seamless infrastructure deployments. - Using Ansible alongside Terraform for configuration management and system hardening. - Implementing GitOps practices for Kubernetes cluster management using Kustomize and Helm.

Monitoring & Observability: I build observable systems that provide real-time insights and proactive alerting. My experience includes: - Setting up end-to-end monitoring stacks with Prometheus, Grafana, and

AWS CloudWatch. - Centralizing logs and metrics using OpenSearch/Elasticsearch, Fluent-bit, and Data Prepper. - Creating custom dashboards and alerts to track performance, detect anomalies, and ensure SLA compliance.

Addressing Additional Technology Experience

Heroku: While my direct experience with Heroku is minimal, my deep understanding of cloud-native principles, containerization, and platform-as-a-service concepts allows me to quickly adapt to Heroku's workflow. This limited exposure will not impact my ability to deliver high-quality infrastructure solutions.

Windows Services Stack: I have medium-level experience with Windows Server, Active Directory, and MS SQL Server—sufficient for effective management, troubleshooting, and support in hybrid environments. This knowledge enables me to collaborate seamlessly with teams that rely on Windows-based services and ensures smooth integration with Linux-based cloud infrastructure.

Certifications and Compliance Standards

Certifications: - Terraform Associate Certification (HashiCorp, 2022) - AWS Solutions Architect (2017) - Azure Cloud Specialist + Open Source (2017) - CompTIA Security+ (In Progress)

Compliance & Security Standards: - ISO 27001/27002: Information Security Management & Controls - SOC 2 Type II Compliance - GDPR & HIPAA Regulations

Why I'm a Strong Fit

I am passionate about building infrastructure that is not only robust and scalable but also cost-effective and aligned with business goals. My approach combines technical depth with a collaborative mindset, ensuring that infrastructure decisions support rapid delivery without compromising on security or reliability.

Thank you for considering my application. I am eager to bring my AWS, Terraform, and infrastructure management skills to your team and contribute to your cloud engineering success.

Sincerely,

Andrés Renaud
